

Financial structures to support CARBON PROJECT DEVELOPMENT

Organizations
are able to play a
more causal role in
the development
of projects in
the form of:

FORWARD OFFTAKE COMMITMENT

(no upfront capital requirement but involves a long-term commitment to a future stream of credits, often at a fixed price)

PREPAYMENT

(the buyer provides capital towards a new project upfront in exchange for a future stream of credits)

AGGREGATED DEMAND

(join forces with other buyers to share due diligence resources and send market signals needed to scale projects)

EQUITY INVESTMENTS

(direct investment in an organization or a specific asset)

LONG-TERM OFFTAKE AGREEMENT

(purchase a set number of carbon credits from existing projects at a set price)

 = New projects only

EXAMPLE BENEFITS OF CARBON PROJECT INVESTMENT:

- ✓ Grants access to supply that can help your organization achieve short- and long-term targets
- ✓ Presents opportunity to play a causal role with a project, while making progress on business goals
- ✓ Sets your organization apart from the competition
- ✓ Helps tackle hard-to-abate emissions in unregulated sectors
